Z A A H I

Real Estate OS

Document: Pitch Deck (markdown source, 18 slides) **Prepared for:** Rodolphe Belin ("Rudi") — Principal Investor **Prepared by:** Zharkyn Ryspayev ("Zhan") — Founder, CEO/CTO · Dmytro Tsvyk ("Dymo") — Co-founder, Operations Principal **Date:** 2026-04-19 **Meeting:** Sunday 2026-04-19, Al Jurf **Status:** Source for Figma / Keynote rendering before Sunday meeting **Classification:** CONFIDENTIAL

Brand guidelines for rendering: Georgia serif for titles, `-apple-system` / Inter sans for body; ZAAHI palette (gold `#C8A96E` accent on navy `#1A1A2E` or white-glass backgrounds); glassmorphism cards with `backdrop-filter: blur(16px)` and gold-tinted 1 px borders; uppercase letter-spaced labels for section markers; numbers large (font-weight 800, `-0.02em` letter-spacing).

Contents

Slide 16 — Use of Funds (AED 1,000,000)

Every dirham accounted for. Agency launch only. Platform funded from agency revenues thereafter.

Slide 17 — The Ask

AED 1,000,000 · 80 % Agency (pre-Sunset) → 33.34 % (post-Sunset) · 10 % Platform for life · IPO path through Platform.

Slide 18 — Next Steps

Sunday 2026-04-19 MOU · Monday 2026-04-21 agency formation documents · First deal target June – July 2026 · Platform opens on first closed deal.

Appendix — slides reserved but not shown in the 18

Slide 1 — Title

ZAAHI

The Real Estate OS for UAE

[Logo placeholder — ZAAHI wordmark in gold on dark navy ground. Below wordmark: tagline. Bottom-left: `Confidential — Prepared for Rudi · Sunday 2026-04-19 · Al Jurf`. Bottom-right: `zaahi.io`.]

Emotional beat: trust and poise. 5 seconds. Pause. Do not read the tagline. Let the product speak — open `zaahi.io` on the screen behind the deck if possible.

Slide 2 — The Problem

The UAE real estate market is AED 1 trillion of transaction flow fragmented across ten disconnected systems.

- Dubai Land Department, RERA, DDA, Abu Dhabi Municipality, ADGM, DIFC, VARA, individual developers, hundreds of brokerages — each a separate data silo.
- A single transaction today requires a buyer or broker to navigate 10+ tools: listings site → broker Excel → developer PDF → DLD portal → bank mortgage system → escrow bank → Trakheesi permit → Oqood registry → Ejari portal → notary.
- Foreign and institutional capital enters with enthusiasm; leaves with friction stories.
- AI, blockchain, 3D geographic intelligence remain experimental across the category.

Visual note: screenshot collage of the 10 disconnected systems with red arrows between them. Centre of the collage: empty space labelled "the buyer, broker, and owner sit here — alone, with no unified layer."

Presenter notes: Do not dwell on the negativity. The pain is intuitive to anyone who has closed a UAE real estate deal. Move forward.

Slide 3 — The Solution

ZAAHI is the horizontal operating system that unifies this market — a Real Estate Graph centred on the Plot.

- Every physical parcel is a node. Every participant (owner, buyer, broker, developer, bank, government, architect) connects to it. Every transaction, document, and data layer attaches to it.
- One platform. 85 integrated modules. 12 functional blocks.
- Architected as a plugin system: every new country, participant type, or asset class is an additive module — the core never changes.

Visual note: an animated graph diagram. In the centre, a single 3D parcel (pulled from real `zaahi.io` 3D render, one of the 114 live parcels). Around it, 12 branches expanding outward, each a Block (A Assets, B Participants, C Transactions, D Technology, E Infrastructure, F Finance, G Development, H Governance, I Intelligence, J Ecosystem, K Access, L Operations). On rollover, each branch expands to show its sections.

Presenter notes: Pause on this slide longer than usual. This is the conceptual heart of the deck. Say: "Every other real estate company thinks of their product as listings or transactions or analytics. We think of the Plot as the atom — and then build everything a participant could ever need around that atom. That is why we call ourselves an OS, not an app."

Slide 4 — The Market

AED 2+ trillion asset market. AED 761 billion transaction flow. 215,060 sales transactions in 2025 alone.

- **TAM** — UAE real estate asset market: **AED 2+ trillion** in installed property value.
- **SAM** — platform-addressable transaction flow: **AED 760+ billion** annually (Dubai + Abu Dhabi + other emirates).
- **SOM** — ZAAHI platform-and-agency capture:
- Year 1: AED 390 M transaction volume (12 premium plots + 2 off-plan floors, plus 40-subscriber platform seed).
- Year 3: AED 5 B transaction volume.
- Year 5+: AED 15 B+ transaction volume; category-leading position.
- Q1 2026 alone: AED 252 B, +31 % YoY. Market acceleration, not deceleration.

Visual note: three concentric rings. Outer ring (TAM) in a pale gold. Middle ring (SAM) in ZAAHI gold `#C8A96E`. Inner solid disc (SOM Year 1 / Year 3 / Year 5 layered in deepening gold). Annotations pointing to each ring with the AED figure.

Presenter notes: Rudi knows the UAE market. Do not explain what it is — explain the inflection point. Emphasise the 31 % YoY growth in Q1 2026. Pause. Say: "This is not a static market we are entering. It is accelerating."

Slide 5 — Product (Live Today)

`zaahi.io` — live in production. Not a mock. Not a wireframe. A working platform.

- 114 verified parcels loaded with live data.
- 556,000 plots mapped across Dubai, Abu Dhabi, and Oman via PMTiles.
- 3D ZAAHI Signature visualisation — proprietary podium / body / crown building rendering.
- Archibald multilingual AI assistant live.
- RERA-compliant single-tier referral program live (commission-based from 2 % ZAAHI Service Fee on closed deals; no subscription).
- Feasibility Calculator live for off-plan evaluation.
- Phase 1 dashboards live for Owner, Buyer, Broker roles.
- Full glassmorphism UI — the visual language is ZAAHI's commercial signature.

Visual note: a 2×2 grid of real `zaahi.io` screenshots (not mocks). Top-left: 3D map of Dubai with 114 parcels highlighted in gold. Top-right: parcel detail side-panel with affection plan and 3D render. Bottom-left: Archibald chat conversation in progress. Bottom-right: Referral program dashboard + tier subscription options. Subtle gold borders on each screenshot to match product UI.

Presenter notes: This is the slide where Rudi has already been converted. He saw the live demo on April 17. Remind him briefly: "The product you saw operating on the screen last week is what is on this slide. It is not going to be; it is."

Slide 6 — Demo Validation

April 17, 2026: Rudi experienced live demo of zaahi.io. Within 24 hours: verbal commitment. Sunday April 19: this package formalises that partnership.

- **April 17, 2026** — investor demo. Live product walked through, every claim reconciled with production code.
- **April 18, 2026** — verbal commitment. AED 1,000,000 investment confirmed; corporate structure finalised April 19 with controlling investor position during payback (80 % Agency) and equal partnership thereafter (33.34 % post-Sunset), plus 10 % Platform perpetual. Monetization model finalised: single-tier RERA-compliant referral program + tier-based role subscriptions (Developer AED 50k/yr · Broker AED 20k/yr · Architect AED 10k/yr · Investor/Buyer AED 5k/yr · Land Owner AED 3k/yr).
- **Sunday April 19, 2026** — MOU signed, Al Jurf. Monday April 21: Agency formation documents submitted.

Visual note: precise three-point timeline. Left: "Apr 17 · Demo delivered" (with zaahi.io screenshot). Middle: "Apr 18 · Commitment secured" (with handshake symbol in gold). Right: "Apr 19 · MOU signed, Al Jurf" (with pen / signature symbol). Thin gold line connecting them.

Emotional beat: earned confidence. The reason we are sitting here is because the product worked. Acknowledge it directly — do not apologise, do not oversell.

Slide 7 — Vision: Master Tree v3

85 integrated sections · 12 functional blocks · 10-year roadmap.

Visual note: a large tree diagram. Trunk labelled ZAAHI. Twelve main branches, one per Block (A–L). Each branch splits into its sections with section numbers. Currently-live sections highlighted in solid gold; partially-built in half-gold; not-yet-started in outlined gold. The eye sees: a large tree, mostly outlined, with a gold-filled cluster around Block A Assets and Block B Participants and isolated gold nodes across other blocks (§18 Referrals, §41 AI, §47 Notifications, §77 Web Platform, etc.).

Key points: - **Additive architecture** — every section is independently shippable; no monolithic rewrites; no "big bang" releases. - **Plugin per country** — new jurisdiction (Saudi, Ukraine, Albania, future) = one plugin configuration; core is untouched. - **Canonical source of truth** — the Master Tree architecture document is the reference for every architectural decision in the company. - **Full real estate lifecycle coverage** — the Master Tree architects the complete lifecycle: land acquisition → development → sale → rental → resale → tokenisation. Across asset classes (land, off-plan, ready residential, ready commercial, mixed-use, hospitality, warehouse/industrial) and rental segments (long-term, short-term / holiday homes, co-living, co-working, rent-to-own). Plus B2B2G partnerships with banks, developers, luxury brands, cities, and governments. No competitor has drafted this scope. - **Currently live: ~6–8 % by section count, higher by user-visible weight.** Gap analysis available as appendix.

Presenter notes: This is the "why we are building a decade-long asset" slide. The audacity of the scope is the investment thesis. Say: "What you saw at demo was Block A Assets and part of Block B Participants. There are ten more blocks behind it. Each one is a product. Each one, over ten years, is a category."

Slide 8 — Business Model

Dual-engine: Agency revenue today · Platform revenue scaling over the decade.

Engine	Asset	Revenue model	Time to revenue
Agency	Dubai Mainland LLC	Brokerage commission on premium land plots (2 %) and off-plan floors (3–5 %)	Weeks
Platform	ADGM HoldCo, live at `zaahi.io`	21 revenue streams architected: 2 % ZAAHI Service Fee on platform-routed deals, tier-based role subscriptions (Developer / Broker / Architect / Investor / Owner), AI premium access, data licensing; RERA-compliant single-tier referral program	Months to years

- Agency funds the platform. 70 % of every agency net profit flows into platform development.
- Platform compounds. Each new section unlocks new revenue streams and new moat.
- The agency is the cash. The platform is the asset.

Visual note: two large circular nodes (Agency left, Platform right) connected by a gold arrow labelled "70 %". Below the arrow, a smaller reverse arrow labelled "Credibility · Data · Deal Flow." The platform circle expands outward with small sub-circles representing each of the 21 revenue streams.

Presenter notes: This is the slide to defend. A typical investor asks "why agency AND platform?" The answer: because the platform is 3–5 years from meaningful revenue; the agency is 3–5 months. Without the agency, the platform starves. Without the platform, the agency is just another Dubai brokerage. Together, they are ZAAHI.

Slide 9 — Agency (Dubai Mainland LLC)

Rudi 80 % pre-Sunset → 33.34 % post-Sunset · premium plots + off-plan floors · 12 deals + 2 floors Year 1 · AED 7.8 M Y1 revenue · RERA-licensed founders.

- **Cap table pre-Sunset (Years 0–3 or until AED 2 M cumulative to Rudi): Rudi 80 % · Dymo 10 % · Zhan 10 %**. Rudi is the controlling investor during the payback period.
- **Cap table post-Sunset (automatic rebalance): Rudi 33.34 % · Dymo 33.33 % · Zhan 33.33 %**. Three-way equal partnership once Rudi has been made whole (2× return OR 5 years, whichever earlier).
- **Sunset trigger:** earlier of (a) AED 2 M cumulative distributions to Rudi from both entities OR (b) 5-year anniversary of SAFE Closing Date. Automatic on business day following trigger; no Board resolution needed. **Base case Financial Trigger: mid-Year 3.**
- **Focus** — premium land plots (AED 500 M – 2 B range, 1–2 % commission; average targeted deal AED 22.5 M → AED 450 k commission) and off-plan floor-level sales (10–20 units per floor, AED 30 M floor size, 4 % commission → AED 1.2 M).
- **Year 1 base target** — 12 premium plot deals + 2 off-plan floors = AED 7.8 M Agency gross revenue.
- **Operators** — Dymo (Co-founder, 18+ years global ops, Dubai RE since 2018) leads day-to-day; Zhan (Founder, CEO/CTO, 17 years RE) retains strategic oversight. Both RERA-licensed.
- **Regulatory path** — Agency formation documents submitted Monday 2026-04-21; LLC registration 2–4 weeks; RERA company broker licence and Broker Cards in parallel; Trakheesi permits per listing; DLD Broker Permit.

Visual note: two cap-table pie charts side-by-side. Left: "Pre-Sunset (Years 0–5)" with Rudi 80 % gold dominant, Dymo + Zhan 10 % slivers. Centre arrow labelled "Sunset: 2× return OR 5 years". Right: "Post-Sunset" with three equal gold slices (Rudi 33.34, Dymo 33.33, Zhan 33.33). Small callout: "Office location TBD — Dubai or Abu Dhabi Mainland; Al Jurf Sunday meeting is a signing venue, not the operating office."

Presenter notes: Say: "Your AED 1 M buys 80 % of the Agency during the payback period. After you've been paid back 2× in cash distributions, or after five years — whichever comes first — the Agency rebalances to a three-way equal partnership. The 0.01 pp tiebreaker goes to you in recognition of the capital you put in. Platform stays at 80 % my / 10 % Dymo / 10 % yours throughout; Platform does not go through Sunset. 70 % of every Agency profit funds the Platform. That's the deal."

Slide 10 — Platform (ADGM HoldCo)

Zhan 80 % · Dymo 10 % · Rudi 10 % · 21 revenue streams. Platform entity opens with the first agency deal.

- **Cap table — Zhan 80 %** (founder controls Platform) · **Dymo 10 %** · **Rudi 10 %** (lifetime upside).
- **Live today:** 2 % ZAAHI Service Fee on platform-routed deals · RERA-compliant single-tier referral program (commission-based, no subscription).
- **Year 1 monetization** — tier-based role subscriptions: **Developer AED 50 k/yr · Broker AED 20 k/yr · Architect AED 10 k/yr · Investor/Buyer AED 5 k/yr · Land Owner AED 3 k/yr.** Target Y1 enrolment: 40 subscribers across tiers. Y1 Platform revenue AED 510 k.
- **Year 2 pipeline:** Archibald AI premium access + API usage · data licensing to institutional investors · government document facilitation.
- **Year 3–5 pipeline:** remainder of the 21 streams — fractional ownership, auction fees, robotics contracts, satellite data, country-data licences, NFT/tokenised marketplace (VARA-dependent).
- **Year 5 Platform target:** AED 60 M revenue; 500 active subscribers.
- **Full-lifecycle coverage:** Platform monetization spans land + off-plan + ready property (residential + commercial) + residential/commercial leasing + short-term rentals + partnerships with banks, developers, luxury brands, cities, and governments. Base case focuses on Agency + platform subscriptions; additional segments (15 base case + 30 expansion opportunities = 45 total documented streams) activate as Platform scales.
- **Platform entity** opens with the first agency deal closure (June – July 2026 target).

Visual note: cap-table pie chart (Zhan 80 % gold dominant, Dymo + Rudi 10 % each slivers). Fan of 21 revenue-stream cards: top two in solid gold (live), next three half-gold (Year 1), next three outlined (Year 2), remaining thirteen ghost (Year 3–5).

Presenter notes: Say: "Your 10 % of the Platform is for life. The Platform is the long-horizon upside — 21 revenue streams, 85-section Master Tree, exit value in Years 3–10. Zhan controls Platform at 80 % because he built it; Dymo and you each hold 10 % for life."

Slide 11 — Traction

The product is operating. The market is responding.

- **Platform** — `zaahi.io` in production; 114 parcels live; 556,000 plots mapped across Dubai, Abu Dhabi, Oman; 266 API endpoints; 18 pages; 15 Prisma data entities; 12 production migrations.
- **Referral program** — RERA-compliant single-tier commission-based program live; referrers earn from 2 % ZAAHI Service Fee on closed deals (zero subscription cost to referrers); admin approval pipeline operational.
- **Brand** — ZAAHI Signature 3D rendering (proprietary), glassmorphism visual language, multilingual (EN, AR, RU, UK, SQ, FR).
- **Demo track record** — successful investor demo 2026-04-17, immediate commitment secured.
- **Pipeline** — agency launch funnel identified: plot owners across Dubai and Abu Dhabi, off-plan developers, HNWI foreign-buyer inquiries routed through Archibald.

Visual note: a panel of KPI tiles. "114 parcels", "556 K plots", "266 API routes", "2 full sections", "19 partial sections", "6 languages", "9 land-use categories". Below: a micro-timeline of product milestones since platform inception.

Presenter notes: This is the first slide with hard numbers. Do not round. Speak them precisely. Rudi respects specificity.

Slide 12 — Competitive Moat

Five defensible advantages — none replicable overnight.

1. **3D ZAAHI Signature is proprietary.** Podium / body / crown rendering — founder-designed, instantly recognisable, not pullable from any template library. Every plot on `zaahi.io` renders in this signature style. Competitors would need a year of design + engineering investment to match, and would still not own the brand equity.
2. **Master Tree architecture (85 sections, 12 blocks) is a 10-year product roadmap no competitor has drafted.** A competitor starting today cannot

catch up; every decision they make compromises future integration. The tree is additive-only by design — we can ship section by section, year by year, without architectural rewrites.

3. **Self-sovereignty positioning differentiates from US-based platforms that cannot operate long-term in UAE under data residency.** ZAAHI's migration path from rented cloud to own data centres (Q3 2026 Equinix Dubai → Phase 2–5) is architected from day one. A Propy or Opendoor expanding here cannot plausibly replicate this.
4. **Founder domain depth.** 17 years real estate (Zhan) + 18 years global operations (Dymo) + both RERA-licensed + full-stack engineering capability in one CEO/CTO. This combination is uniquely rare in the UAE proptech landscape.
5. **Tier-based subscription + commission referral economics in production.** Role-specific subscriptions (Developer 50 k · Broker 20 k · Architect 10 k · Investor 5 k · Owner 3 k per year) capture high-intent participants across the full real-estate value chain. Single-tier RERA-compliant referral program adds commission-based viral growth. Revenue-aligned growth without paid-CAC-heavy marketing.
6. **Full-lifecycle platform coverage.** Unlike competitors focused on single segments (Bayut listings / Huspy mortgages / PRYPCO tokenisation), ZAAHI architects all real estate segments (land, off-plan, ready residential/ commercial, mixed-use, hospitality, rental long-term/short-term, co-living, warehouse/industrial) plus B2B2G partnerships (banks, developers, luxury brands, cities, governments) into one Master Tree. No competitor has drafted this scope.

Visual note: a shield icon with five engraved lines, each one a moat element. Subtle gold filigree. Around the shield: silhouetted logos of competitors (Bayut, Property Finder, Huspy, PRYPCO, Propy) greyed out.

Presenter notes: Frame this positively: ZAAHI is complementary to many of these competitors, not substitutional. Bayut is a listings portal. Property Finder is a listings portal. Huspy is mortgage + brokerage. PRYPCO is tokenisation. ZAAHI is the OS they will all integrate into over the decade. We win by scope and architecture, not by replacing them.

Slide 13 — Go-to-Market

Three channels, each layered on the one before.

- **Channel 1 — Founder-led agency (Months 1–12).** Zhan and Dymo close deals directly, leveraging existing relationships and RERA credentials. Premium plots + off-plan floors across Dubai and Abu Dhabi. First 12

premium-plot deals + 2 off-plan floors in Year 1 prove the model; each generates platform-dev funding and data for the platform.
- **Channel 2 — Platform invitations to partner brokerages (Months 6–24).** Tier-based subscriptions open from Month 1 to founder-network seed users (40 Y1); paid marketing opens Month 12+ to broader brokerage community. Referral-sourced signups power early growth without paid-CAC.
- **Channel 3 — Institutional and developer tier (Year 2+).** Direct sales to family offices, sovereign funds, and master developers. Archibald AI + data licensing + API marketplace. This is where platform revenue scales from thousands to millions.

Visual note: three horizontal bars stacked. Bar 1 (agency) thick in the early months, tapering as bars 2 and 3 layer in. Bar 2 (brokerages) begins thin at Month 12 and thickens. Bar 3 (institutional) begins at Month 18 and compounds. X-axis: Months 1–36. Y-axis: revenue contribution.

Presenter notes: Investors have seen this shape before. The innovation is that channel 1 is the foundation, not a placeholder. Say: "This is not a pure-platform company pretending to have near-term revenue. The agency is a real, funded, RERA-licensed business that closes real deals with real commissions from month four."

Slide 14 — Team

Three principals. Each protected contractually. Each committed long-term.

- **Zhan Ryspayev — Founder, CEO/CTO.** 17 years real estate; full-stack engineer; RERA-licensed; architect of ZAAHI platform and Master Tree v3 vision.
- **Dymo Tsvyk — Co-founder, Operations Principal.** 18+ years global operations leadership at Stolt-Nielsen and Bahri; in UAE real estate since 2018; RERA-licensed.
- **Rudi — Principal Investor, Board Member.** Partner at Equilibrium Advisory Group. 80 % Agency (controlling during payback) → 33.34 % Agency (equal partner post-Sunset); 10 % Platform for life; one board seat of three. AED 1,000,000 commitment.

Three equal Agency partners post-Sunset; Platform led by Zhan (80 % majority, perpetual — Zhan built the platform). Both founders have symmetric salary-and-transfer protection packages (Salary Floor paid from the entity they lead; Tag-Along + ROFR on Rudi share transfers). See the Zhan Protections and Dymo Protections addenda.

Visual note: three circles in a triangle. Each labelled with name, title, and one credential bullet. Beneath the triangle: caption "Agency: Rudi controls pre-Sunset → equal post-Sunset · Platform: Zhan 80 % throughout".

Presenter notes: Say: "Rudi, you are on this slide — not because you have an operational role, but because your board seat and capital make this company complete. Without you, we launch the agency six months later and with less certainty. With you, we launch Monday."

Slide 15 — Financials

Year 1 base case: AED 8.3 M revenue · AED 5 M EBITDA · AED 407 k Year 1 distribution to Rudi · AED 437 M 10-year projected total return (437×).

Line (AED '000)	Year 1	Year 2	Year 3	Year 4	Year 5
Agency revenue (premium plots + off-plan floors)	7,800	15,500	33,500	65,000	130,000
Platform revenue (subscriptions + transaction fee + data)	510	3,500	8,500	25,000	60,000
Total revenue	**8,310**	**19,000**	**42,000**	**90,000**	**190,000**
EBITDA	5,000	10,200	22,000	47,000	95,000
Distributable Net Profit	4,068	8,100	17,500	37,000	76,000
Rudi 10 % cash distribution	**407**	**810**	**1,750**	**3,700**	**7,600**
Rudi cumulative distributions	407	1,217	2,967	6,667	14,267

Assumptions: 12 premium plot deals + 2 off-plan floors Y1. Full 16-section professional P&L with conservative / base / aggressive scenarios and sensitivity analysis in the Profit & Loss Statement; Excel template in the Financial Model.

- **Operating breakeven: Month 2** (first deal closes from Dymo's founder-network pipeline).
- **Sunset Financial Trigger (AED 2 M cumulative to Rudi): mid-Year 3 base case.**
- **10-year total return to Rudi (Base): AED 437 M (437× MOIC, ~80 % IRR)** = ~AED 115 M Agency + Platform cash distributions + ~AED 322 M Platform IPO proceeds at Y10.

- Dividend mechanics: quarterly, Dividend Policy codified in SHA. First distribution follows the first closed agency deal (June – July 2026 target) on the quarterly cadence thereafter.

Visual note: a five-column bar chart showing Year 1 – Year 5 Distributable Net Profit in AED thousands. Rudi's 10 % share highlighted as a thin gold ribbon on top of each bar. Cumulative curve overlaid with AED 2 M Financial Trigger line.

Presenter notes: Say: "Year 1 is 12 premium plot deals plus 2 off-plan floors — that's founder-confirmed deal pipeline from Dymo's Equilibrium Advisory network, not aspirational. Your Year 1 distribution is AED 407 k. Sunset Financial Trigger fires mid-Year 3. Your 10-year total return, modelled conservatively, is AED 437 M — 437 times your AED 1 M. The Platform IPO is the largest contributor at Y10."

Slide 16 — Use of Funds (AED 1,000,000)

Every dirham accounted for. Agency launch only. Platform funded from agency revenues thereafter.

Category	AED	%	Notes
Legal & entity formation	180,000	18 %	Dubai Mainland LLC + ADGM HoldCo + Abu Dhabi branch + SAFE + SHA + IP assignment; top-tier counsel engagement
RERA company broker licence + Cards	20,000	2 %	RERA AED 12,900 + two Broker Cards; annual renewals thereafter
Home + office lease Al Jurf (3-month advance of AED 250 k/year)	62,500	6.25 %	Live-work operational hub; office on 1st floor; strategic Dubai – Abu Dhabi corridor
Virtual office Dubai address (RERA Mainland compliance)	15,000	1.5 %	LLC registered Dubai address; physical operations from Al Jurf
Office fit-out (1st floor only)	30,000	3 %	Desks, chairs, meeting table, AV setup, WiFi, printer
Vehicle (operations + client meetings)	80,000	8 %	Pre-owned or lease down-payment; registered in company name
Camera + video production equipment	40,000	4 %	Sony A7IV-class + lenses + lighting + drone + editing workstation — enables in-house content strategy (competitive moat)
Laptops + computers	25,000	2.5 %	Founders + videographer business laptops
Videographer salary (6 months)	60,000	6 %	AED 10 k/month; first employee; enables in-house production
Founders salaries (Dymo + Zhan, 6 months)	180,000	18 %	Salary Floor per the Zhan Protections and Dymo Protections addenda
Employee registration (visa + Emirates ID + medical + labor card — videographer)	30,000	3 %	Mandatory onboarding package
Marketing launch	80,000	8 %	LinkedIn sponsored, Google Ads, Property Finder / Bayut placement, Trakheesi permits
Tech infrastructure (Year 1)	50,000	5 %	Vercel / Supabase / Anthropic retention; domains / SSL / monitoring

Category	AED	%	Notes
Insurance (PI + D&O + Key-person)	50,000	5 %	Mandatory for RE brokers + recommended corporate policies
Accounting + compliance + audit	40,000	4 %	Xero / Zoho subscription; monthly bookkeeping; annual audit; VAT / ESR / UBO filings
Working capital reserve	57,500	5.75 %	Cashflow contingency
Total	**1,000,000**	**100 %**	

Visual note: a donut chart. Slices in graduated gold, labelled with percentages. Legend to the right with exact AED figures. Small note: "70 % of future agency profit returns to Platform Development Fund per SHA Dividend Policy — this is a launch allocation, not a steady-state budget. From Year 2, Platform is funded entirely from Agency operations."

Presenter notes: Rudi will scrutinise this slide. Walk through it line by line. Every number has a source in the financial model. Do not apologise for any line item; each one is non-negotiable for a legally compliant, investor-grade operation.

Slide 17 — The Ask

AED 1,000,000 · 80 % Agency (pre-Sunset) → 33.34 % (post-Sunset) · 10 % Platform for life · IPO path through Platform.

The instrument — Post-Money SAFE (YC 2018 standard, adapted to UAE / ADGM law)

- Agency implied post-money: **AED 1,250,000** (Rudi's AED 1 M for 80 %) — reflects pre-operational status
- Post-revenue valuation expected Y2: AED 25–40 M (3–5× revenue multiple on Y1 realised AED 8.3 M)
- Platform 10 % granted at Platform formation (upon first agency deal closure)
- Conversion trigger: entity formation + SAFE execution
- **Economic highlights:** Year 1 Rudi distribution **AED 407 k** · Sunset Financial Trigger **mid-Year 3** · 10-year projected total return **AED 437 M (437× MOIC, ~80 % IRR)**
- Target close: MOU Sunday 2026-04-19 (Al Jurf); Agency formation documents submitted Monday 2026-04-21; SAFE execution upon LLC active; formal Shareholders Agreement thereafter

Equity structure — Agency (pre-Sunset)

Rudi	Dymo	Zhan
80 %	10 %	10 %

Equity structure — Agency (post-Sunset, automatic rebalance)

Rudi	Dymo	Zhan
33.34 %	33.33 %	33.33 %

Equity structure — Platform (ADGM HoldCo, perpetual)

Zhan	Dymo	Rudi
80 %	10 %	10 %

Sunset Clause (earlier of)

- **(a)** Rudi receives cumulative cash distributions totalling **AED 2,000,000** from both entities; OR
- **(b) 5 years** since SAFE execution.

Upon trigger: Agency rebalances 80/10/10 → 33.34/33.33/33.33. Platform cap unchanged. Profit split unchanged (70/10/10/10).

Profit distribution (Agency, every closed deal, fixed for lifetime)

- **Platform Development Fund: 70 %** (tax-deductible inter-company Service Fee)
- **Rudi: 10 %** · **Dymo: 10 %** · **Zhan: 10 %**

Rudi's protection package

- **Governance.** One board seat of three. Simple-majority Board decisions (2 of 3).
- **Reserved matters.** Agency pre-Sunset: Rudi's 80 % controls. Agency post-Sunset: at least 2 of 3 Shareholders. Platform: Zhan's 80 % controls (perpetual).
- **Liquidation preference.** 1× non-participating on any Liquidity Event.
- **Anti-dilution — Agency.** None (no Series rounds planned).
- **Anti-dilution — Platform.** Weighted-average (broad-based) until Series A first closing; pro-rata rights thereafter.
- **MFN.** 12 months post-Closing.
- **Information rights.** Monthly + quarterly + annual + 48 h material events + Sunset ledger.

- **IP assignment.** All ZAAHI platform IP to ADGM HoldCo before SHA execution.

IPO path — through Platform

Platform (ADGM HoldCo) raises Series A / B / C and targets IPO Years 5–10. Agency is an operational brokerage, not publicly traded. Rudi's 10 % Platform participates in the IPO outcome; weighted-average anti-dilution protects through Series A; pro-rata rights after.

Tax efficiency (three-layer)

- **Agency:** UAE CT 9 % above AED 375 K. **SBR not applicable Y1** (Agency revenue AED 7.8 M > AED 3 M threshold). 70 % Service Fee is deductible; effective Agency CT rate ~2 % of gross Agency profit.
- **Platform:** ADGM QFZP targets 0 % on qualifying income.
- **Shareholder:** UAE has no personal income tax and no dividend withholding.
- **Transfer Pricing:** local file required from Year 1 (related-party transactions exceed AED 3.75 M threshold).
- Target combined effective tax: **~2–4 %**.

What Rudi does not carry

- No operational role. No employment obligation. No follow-on capital commitment. No unilateral veto post-Sunset.

Visual note: clean deal-page layout. Left column: "what Rudi gives" (AED 1,000,000). Right column: two Agency cap tables (pre/post Sunset) + Platform cap + profit + protections + IPO + tax summary. Thin gold rule separating the columns.

Presenter notes: Say: "You're the controlling Agency investor during payback. Once you've been paid back two times in cash or five years pass, we become three equal partners — you keep a whisker of a tiebreaker. Platform is a separate company — I run it, you and Dymo each hold 10 % for life. Platform is the IPO path, Agency is the cash engine. Tax is zero to nine percent combined. That's the structure."

Slide 18 — Next Steps

Sunday 2026-04-19 MOU · Monday 2026-04-21 agency formation documents · First deal target June – July 2026 · Platform opens on first closed deal.

Event	Target	Party responsible
Sunday 2026-04-19	MOU signed at Al Jurf	Zhan · Dymo · Rudi
Monday 2026-04-21	Agency formation documents submitted (DED name reservation, draft AoA, KYC); UAE counsel engagement kickoff	Zhan · Dymo · Legal
First weeks	Counsel-approved Post-Money SAFE ready for signing	Legal
2–4 weeks from submission	Dubai Mainland LLC registered; RERA company broker licence in parallel; corporate bank account opened; SAFE executed and AED 1,000,000 wired	Dymo · Legal · All three
Weeks following entity completion	Office secured; first agent hired; Trakheesi permits; first listings live; Shareholders Agreement drafting in progress	Dymo · Legal
June – July 2026 target	First agency deal closed (DLD transfer certificate); ADGM HoldCo (Platform) formation triggered and completed	Dymo · Zhan · Legal
After first closed deal	First agency profit distribution on quarterly cadence; IP transfer to ADGM HoldCo executed	Board
Months 6–12	12 premium plot deals + 2 off-plan floors total Year 1 (base case AED 7.8 M Agency revenue); referral program expanded; tier-subscription enrolment scales to 40 Y1-end; Master Tree §02 Residential + §08 Off-Plan deployed; blockchain audit-trail live	All three
Later	Shareholders Agreement executed with top-tier counsel; Platform Series A preparation	Legal · Zhan · Dymo
Sunset trigger (earlier of)	AED 2 M cumulative to Rudi OR 5th anniversary of SAFE Closing	Automatic

Visual note: Gantt-style horizontal bars over a Sunday-2026-04-19-to-Year-5 timeline. Each bar in ZAAHI gold. Today (2026-04-19) marked with a vertical gold line labelled "Al Jurf MOU day". A second gold line at 2026-04-21 marked "Agency formation documents submitted". A third at June 2026 marked "First deal target — Platform formation". A fourth dotted line at Year 5 marked "Sunset latest trigger".

Emotional beat: executional certainty. Close the deck by saying: "We are prepared to execute every line on this chart. The MOU is the first. Every subsequent item has a named owner and a dated target."

Appendix — slides reserved but not shown in the 18

- **A1** — Full Master Tree diagram (85 sections, 12 blocks).
- **A2** — Gap analysis summary table (2 full / 19 partial / 16 stubbed / 48 not started).
- **A3** — Detailed tier-subscription + single-tier referral program mechanics.
- **A4** — Blockchain strategy (audit-trail only, per the Blockchain Strategy document).
- **A5** — Self-sovereignty migration roadmap (Phase 1–5).
- **A6** — UAE regulatory map (VARA, ADGM FSRA, DFSA, CBUAE, DLD, RERA, DDA, TAMM, Dubai Pulse).
- **A7** — Pricing comparison to Huspy, Property Finder, PRYPCO at comparable stages.
- **A8** — Founder CVs with full employment and transaction histories.

End of deck. Design render in Figma to ZAAHI brand guidelines before Monday.
