Document: Financial Model V1 — Excel / Google Sheets Template Structure **Prepared for:** Rodolphe Belin ("Rudi") — Principal Investor **Prepared by:** Zharkyn Ryspayev ("Zhan") — Founder, CEO/CTO · Dmytro Tsvyk ("Dymo") — Co-founder, Operations Principal **Date:** 2026-04-18 **Meeting:** Sunday 2026-04-19, Al Jurf **Form:** Markdown specification of tab structure, formulas, and assumptions — to be rendered into Excel / Google Sheets before the Sunday meeting (or Week 1 post-MOU) **Audience:** Rudi; UAE legal and tax counsel; future Series A investors **Status:** Template structure — assumptions calibrated by Zhan + Dymo; all computed outputs are formula-driven (no hardcoded result cells)

Contents

All projections are CONSERVATIVE baseline. Ambitious-case scenarios (+100 %) are available upon request.

Tab map

All projections are CONSERVATIVE baseline. Ambitious-case scenarios (+100 %) are available upon request.

The model is built so that every output cell references the Assumptions tab. The scenario toggle in Tab 6 selects Conservative (−50 %), Base, or Aggressive (+100 %) without rewriting formulas. The Distribution Waterfall in Tab 5 models four distinct **Sunset scenarios** — Fast (Y2–3), Base (Y5 Time Trigger), Slow (Y5 Time Trigger, stress), and Never (hypothetical, time trigger removed).

Tab map

The workbook consists of 9 tabs, structured so that changing any input in Tab 1 flows through to outputs in Tabs 3–9.

#	Tab	Purpose	Input vs Output
1	Assumptions	All model inputs	Input only
2	Revenue Projections	Monthly Year 1 + Quarterly Years 2–5	Output
3	OpEx	Headcount, office, marketing, legal, tech, insurance	Mixed
4	Cashflow	Monthly Year 1 + Quarterly Years 2–5	Output
5	**Distribution Waterfall (4 Sunset scenarios)**	Rudi's cumulative returns; Sunset trigger timing; post-sunset mechanics	Output
6	Scenarios	Conservative / Base / Aggressive toggle	Output
6a	Sensitivity Analysis	Stress tests (deal volume, deal size, combined)	Output
7	Breakeven Analysis	Operating / capital / profit breakeven per scenario	Output
8	KPIs (incl. Sunset tracking)	CAC, LTV, deal velocity, Sunset ledger	Output

Tab 1 — Assumptions

1.1 Deal economics (Agency)

Parameter	Base case	Source
Land plot average deal size	AED 20,000,000	Midpoint of 10–30 M range
Land plot commission rate	2.0 %	Task brief
Land plot commission per deal	AED 400,000	Formula
Off-plan average deal size	AED 5,000,000	Midpoint of 1.5–20 M range (entry-weighted)
Off-plan commission rate	4.0 %	Midpoint of 3–5 % range
Off-plan commission per deal	AED 200,000	Formula
Blended commission per deal (60/40 mix)	**AED 320,000**	**Formula**

1.2 Deal velocity (Base case)

Year	Deals	Cumulative
Y1	8	8
Y2	24	32
Y3	60	92
Y4	120	212
Y5	200	412

1.3 Platform revenue (Year 1)

Stream	AED	Rationale
Ambassador tier fees	250,000	Existing production code
ZAAHI service fee on platform-routed deals	150,000	Routing of agency deals
Archibald AI premium access	50,000	Early adopter base
Total platform revenue Year 1	**450,000**	

1.4 Cost structure (Year 1 monthly OpEx ≈ AED 145,000; annual ~AED 1,735,000)

See Tab 3 for breakdown.

1.5 Capital structure

- Rudi investment: **AED 1,000,000** at Closing.
- Working capital reserve target: AED 200,000 minimum.
- 3-month operating reserve: AED 435,000 minimum.

1.6 Sunset Clause parameters (NEW)

Parameter	Value
Financial trigger (AED cumulative to Rudi)	2,000,000
Time trigger (years since SAFE)	5
Sunset is earlier of (a) or (b)	always
Post-sunset Agency cap	Rudi 10 % · Dymo 45 % · Zhan 45 %
Post-sunset Platform cap	Unchanged (Zhan 80 % · Dymo 10 % · Rudi 10 %)
Post-sunset profit split	Unchanged (70 / 10 / 10 / 10)

Tab 2 — Revenue Projections

Year 1 monthly schedule (base case)

Month	Deals closed	Gross commission	Platform rev	Total revenue
M1	0	0	15,000	15,000
M2	0	0	25,000	25,000
M3	0	0	35,000	35,000
M4	1	320,000	40,000	360,000
M5	1	320,000	40,000	360,000
M6	1	320,000	40,000	360,000
M7	1	320,000	40,000	360,000
M8	1	320,000	40,000	360,000
M9	1	320,000	40,000	360,000
M10	1	320,000	40,000	360,000
M11	1	320,000	40,000	360,000
M12	1	320,000	55,000	375,000
Y1 total	**8**	**2,560,000**	**450,000**	**3,010,000**

Years 2–5 (base case)

Year	Deals	Agency rev	Platform rev	Total rev
Y2	24	7,680,000	1,500,000	9,180,000
Y3	60	19,200,000	5,000,000	24,200,000
Y4	120	38,400,000	12,000,000	50,400,000
Y5	200	64,000,000	25,000,000	89,000,000

Tab 3 — OpEx (summary)

Line	Y1	Y2	Y3	Y4	Y5
Zhan compensation (Platform)	480,000	540,000	600,000	660,000	720,000
Dymo compensation (Agency)	360,000	420,000	480,000	540,000	600,000
Agents (1 → 5 over 5 years)	300,000	840,000	1,260,000	1,680,000	2,100,000
Office + tech + marketing	280,000	450,000	700,000	1,000,000	1,400,000
Legal + accounting + audit + insurance	315,000	500,000	800,000	1,200,000	1,800,000
Contingency	100,000	150,000	200,000	300,000	400,000
Total Y1-Y5 OpEx	**1,835,000**	**2,900,000**	**4,040,000**	**5,380,000**	**7,020,000**

Agency OpEx allocation ≈ 40 % · Platform OpEx allocation ≈ 60 % (subject to cost-centre split at SHA).

Tab 4 — Cashflow (Year 1 monthly, base case)

Starting cash: AED 1,000,000 (Rudi Investment).

Month	Revenue	OpEx	Net	Cumulative
M1	15,000	110,000	–95,000	905,000
M2	25,000	110,000	–85,000	820,000
M3	35,000	140,000	–105,000	715,000
M4	360,000	210,000	150,000	865,000
M5	360,000	140,000	220,000	1,085,000
M6	360,000	140,000	220,000	1,305,000
M7	360,000	140,000	220,000	1,525,000
M8	360,000	140,000	220,000	1,745,000
M9	360,000	170,000	190,000	1,935,000
M10	360,000	140,000	220,000	2,155,000
M11	360,000	140,000	220,000	2,375,000
M12	375,000	155,000	220,000	2,595,000

Operating breakeven: **Month 4** (first deal). Capital breakeven: **Month 11**.

Tab 5 — Distribution Waterfall (4 Sunset Scenarios)

This is the **key tab for Rudi**. Each row calculates Rudi's cumulative cash distributions across both entities and tracks the Sunset trigger timing.

Profit split reminder: 70 % Platform, 10 % Rudi, 10 % Dymo, 10 % Zhan (fixed pre- and post-Sunset).

Scenario 1 — Fast Sunset (Financial Trigger Y2–Y3)

Ambitious case: agency grows +100 % vs base (16 deals Year 1, 48 Year 2, etc.).

Year	Agency Net Profit (AED)	Rudi distribution (10 %)	Cumulative Rudi	Trigger?
Y1	2,550,000	255,000	255,000	No
Y2	5,100,000	510,000	765,000	No
Y3	12,750,000	1,275,000	**2,040,000**	**√ Financial Trigger fires mid-Y3**
Y4 post-sunset	25,500,000	2,550,000	4,590,000	— (Rudi continues at 10 %)
Y5 post-sunset	42,500,000	4,250,000	8,840,000	—
Y6-15 post-sunset	—	ongoing 10 % / year	continuing	—
Lifetime Rudi (Y1-Y15 incl. post-sunset)			**~AED 30M+**	

Outcome: Rudi receives 2× back mid-Y3; sunset fires; Rudi continues receiving 10 % of Agency profits for the Agency's lifetime plus 10 % of Platform distributions.

Scenario 2 — Base Case Sunset (Time Trigger Y5)

Base case: 8 deals Y1 → 200 deals Y5, Agency Net Profit growth as in Tab 2.

Year	Agency Net Profit (AED)	Rudi distribution (10 %)	Cumulative Rudi	Trigger?
Y1	1,275,000	127,500	127,500	No
Y2	2,550,000	255,000	382,500	No
Y3	6,400,000	640,000	1,022,500	No
Y4	12,800,000	1,280,000	2,302,500	√ **Financial Trigger fires mid-Y4**
Y5	21,250,000	2,125,000	4,427,500	(sunset has fired; Rudi continues 10 %)
Y6-15 post-sunset	—	ongoing	continuing	—

Outcome: Financial Trigger fires mid-Y4 (before Time Trigger Y5). Rudi receives 2× within ~4 years in base case. Lifetime Rudi including post-sunset Agency 10 % and Platform 10 %: **~AED 15–25M**.

Scenario 3 — Slow Sunset (Stress case — Time Trigger Y5)

Stress C: deal volume –50 %, deal size –30 % (combined shock). Agency Net Profit grows slowly.

Year	Agency Net Profit (AED)	Rudi distribution (10 %)	Cumulative Rudi	Trigger?
Y1	–154,000	0 (loss year)	0	No
Y2	300,000	30,000	30,000	No
Y3	900,000	90,000	120,000	No
Y4	1,800,000	180,000	300,000	No
Y5	3,200,000	320,000	**620,000**	√ **Time Trigger fires Y5** (Financial Trigger not met)
Y6-15 post-sunset	—	ongoing 10 %	continuing	—

Outcome: Financial Trigger (AED 2 M cumulative) not reached by Year 5 — only AED 620 k cumulative. Time Trigger fires automatically at Y5. Rudi converts to 10

% Agency minority. Liquidation preference (1× = AED 1 M) remains as floor on any sale. Rudi continues to receive 10 % of Agency profits post-sunset plus 10 % Platform for life.

This scenario explains why the time-based trigger was added — it guarantees the control return happens regardless of financial velocity.

Scenario 4 — Never Sunset (hypothetical — time trigger removed for comparison)

What if only the Financial Trigger existed (no 5-year cap)? Using Scenario 3 cash flows (slow):

Year	Agency Net Profit	Rudi distribution	Cumulative Rudi	Trigger?
Y5	3,200,000	320,000	620,000	No
Y6	5,000,000	500,000	1,120,000	No
Y7	7,500,000	750,000	1,870,000	No
Y8	10,000,000	1,000,000	**2,870,000**	**√ Financial Trigger would fire Y8**

Outcome: In the stress case without a time cap, Rudi stays 80 % owner until Year 8 — too long. The 5-year time cap prevents this: Rudi converts to 10 % at Year 5 regardless, and continues receiving 10 % of Agency profits.

This scenario is for illustration only — the actual deal includes the time cap.

Waterfall summary (Rudi's outcome across scenarios)

Scenario	Sunset trigger	Time of sunset	Rudi cumulative at sunset	Post-sunset lifetime Rudi (est.)
1 — Fast	Financial	Mid-Y3	AED 2 M	AED 30 M+
2 — Base	Financial	Mid-Y4	AED 2 M	AED 15–25 M
3 — Slow	Time	Y5	AED 620 k	AED 5–10 M (plus liq pref AED 1 M floor)
4 — Never (hypothetical)	N/A	—	—	would stay 80 % indefinitely — avoided by time cap

Tab 6 — Scenarios (toggle)

Conservative / Base / Aggressive side-by-side:

Metric	Conservative	Base	Aggressive
Year 1 deals	4	8	16
Year 1 commission	1,280,000	2,560,000	5,120,000
Year 1 total revenue	1,505,000	3,010,000	5,820,000
Year 1 net profit	–95,000	1,275,000	3,620,000
Rudi Year 1 distribution	0	127,500	362,000
Expected Sunset scenario	3 (Slow, Time trigger Y5)	2 (Base, Financial Y4)	1 (Fast, Financial Y2–3)

Tab 6a — Sensitivity Analysis (stress tests)

Parameter	Base	A: Deal volume −50 %	B: Deal size −30 %	C: Both (Stress)
Year 1 deals	8	4	8	4
Avg deal commission	320,000	320,000	224,000	224,000
Year 1 agency revenue	2,560,000	1,280,000	1,792,000	896,000
Year 1 total revenue	3,010,000	1,730,000	2,242,000	1,346,000
Year 1 OpEx	1,735,000	1,600,000	1,735,000	1,500,000
Year 1 net profit	1,275,000	130,000	507,000	–154,000
Runway end of Y1	Healthy	AED 1.1 M	AED 1.5 M	AED 900 k
Sunset scenario	2 (Base)	3 (Slow, Time Y5)	2 (Base, Financial Y4)	3 (Slow, Time Y5)

Runway calculation. Months until Agency is self-sustaining = (Starting cash − cumulative net outflow) / monthly burn. Base case: Agency self-sustaining from Month 4 onward. Stress C: bridge of AED 300–500 k or cost cuts by Month 10 to extend past Year 1.

Tab 7 — Breakeven Analysis

Metric	Conservative	Base	Aggressive
Operating breakeven	Month 7–8	Month 4	Month 3
Capital breakeven (AED 1 M restored)	Month 18	Month 11–12	Month 8
Profit breakeven (cumulative > 0)	Month 14	Month 7	Month 5

Tab 8 — KPIs (incl. Sunset ledger)

Agency KPIs

- Deal velocity: 8 Y1 → 200 Y5 (base).
- Avg commission per deal: AED 320,000.
- Gross margin per deal: 60–65 %.
- Cost per acquired deal: target < AED 25,000 by Y2.

Sunset KPIs (NEW — tracked monthly)

- **Cumulative cash distributions to Rudi (across both entities)** — running total toward the AED 2 M Financial Trigger.
- **Time elapsed since SAFE execution** — running counter toward the 5-year Time Trigger.
- **Projected Sunset trigger date** — model extrapolation based on current cash-distribution velocity.
- **Sunset-scenario mapping** — current business trajectory mapped to Scenario 1 / 2 / 3.

Platform KPIs

- Ambassador tier distribution (SILVER/GOLD/PLATINUM mix).
- Monthly active platform users (MAU): 500 end Y1 → 50,000 end Y3.
- Platform revenue per MAU: AED 500 by Y2.

Team KPIs

- Headcount: 3 → 6 → 12 by Y3.
- Revenue per FTE: AED 600 k+ end Y1 → AED 1.2 M+ end Y3.

Financial KPIs

- Gross margin: Y1 ~58 % → Y3 target 70 %.
- EBITDA margin: Y1 ~42 % → Y3 target 55 %.
- Runway: 12+ months at all times; 18+ months pre-Series A.
- Cash on balance sheet: AED 2 M+ from end Y1.

Notes for model build

1. **Formulas, not hardcodes.** Every output references Tab 1 Assumptions.
2. **Named ranges:** `AvgDealSize`, `CommissionRate`, `ZhanSalary`, `RudiSunsetCumulative`, `SunsetFinTrigger`, `SunsetTimeTrigger`.
3. **Scenario switch:** single dropdown cell (Conservative / Base / Aggressive) toggles assumption set.
4. **Sunset tracker:** dedicated row on Dashboard showing "AED X of AED 2,000,000 toward Financial Trigger · Y months of 60 months toward Time Trigger · projected sunset: [date]."
5. **Output sheet (Dashboard):** headline metrics only (Y1 revenue, Y1 net profit, breakeven month, cash end of year, Rudi cumulative, projected sunset trigger, sunset scenario).
6. **Version control:** each iteration saved with date suffix.

End of Financial Model specification. To be converted to Excel / Google Sheets by Zhan + Dymo before the Sunday 2026-04-19 Al Jurf meeting (or Week 1 post-MOU).
