Document: Financial Model — Excel / Google Sheets Template Structure **Prepared for:** Rodolphe Belin ("Rudi") — Principal Investor **Prepared by:** Zharkyn Ryspayev ("Zhan") — Founder, CEO/CTO · Dmytro Tsvyk ("Dymo") — Co-founder, Operations Principal **Date:** 2026-04-19 **Meeting:** Sunday 2026-04-19, Al Jurf **Form:** Markdown specification of tab structure, formulas, and assumptions — to be rendered into Excel / Google Sheets before the Sunday meeting (or Week 1 post-MOU) **Audience:** Rudi; UAE legal and tax counsel; future Series A investors **Status:** Template structure — assumptions calibrated by Zhan + Dymo; all computed outputs are formula-driven (no hardcoded result cells) **Classification:** CONFIDENTIAL

Contents

All projections are BASE CASE. Conservative (−50 %) and Aggressive (+50 %+) scenarios in Tab 6.

All projections are BASE CASE. Conservative (−50 %) and Aggressive (+50 %+) scenarios in Tab 6.

The model is built so that every output cell references the Assumptions tab. The scenario toggle in Tab 6 selects Conservative (−50 %), Base, or Aggressive (+50 %+) without rewriting formulas. The Distribution Waterfall in Tab 5 models four Sunset scenarios (Fast Y2, Base mid-Y3, Slow Y4, Time-cap Y5) plus Platform IPO exit scenarios. Tab 8 models the three-layer tax efficiency (Agency 9% CT post-SBR + QFZP Platform + 0 % personal).

Tab map

The workbook consists of 9 tabs, structured so that changing any input in Tab 1 flows through to outputs in Tabs 3–9.

#	Tab	Purpose	Input vs Output
1	Assumptions	All model inputs	Input only
2	Revenue Projections	Monthly Year 1 + Quarterly Years 2–5	Output
3	OpEx	Headcount, office, marketing, legal, tech, insurance	Mixed
4	Cashflow	Monthly Year 1 + Quarterly Years 2–5	Output
5	**Distribution Waterfall**	4 Sunset scenarios + Platform IPO exit scenarios	Output
6	Scenarios	Conservative / Base / Aggressive toggle	Output
6a	Sensitivity Analysis	Stress tests (deal volume, deal size, combined)	Output
7	Breakeven Analysis	Operating / capital / profit breakeven per scenario	Output
8	KPIs + Tax Efficiency Analysis	CAC, LTV, deal velocity, Agency CT / QFZP / shareholder tax impact	Output

Tab 1 — Assumptions

1.1 Deal economics (Agency)

Parameter	Base case	Source
Premium land plot average deal size	AED 22,500,000	Midpoint of premium-plot range (500 M – 2 B range targeted; most Y1 deals in 5–40 M range as mid-premium)
Premium land plot commission rate	2.0 %	RERA custom; Property Finder guide
Premium land plot commission per deal	AED 450,000	Formula
Off-plan floor average deal size	AED 30,000,000	10–20 units × AED 1.5–2 M each per floor
Off-plan floor commission rate	4.0 %	Developer floor-block agreements
Off-plan floor commission per deal	AED 1,200,000	Formula
Large premium plots (Y3+) average deal size	AED 1,400,000,000 (1.4 B midpoint)	500 M – 2 B range
Large premium plots commission rate	1.0 % (negotiated down for scale)	Industry precedent for AED 1 B+ deals
Large premium plots commission per deal	AED 14,000,000	Formula

1.2 Deal velocity (Base case)

Year	Plot deals	Floor deals	Large plot deals	Cumulative plot	Cumulative floor	Cumulative large
Y1	12	2	0	12	2	0
Y2	24	4	0	36	6	0
Y3	45	8	1	81	14	1
Y4	65	15	3	146	29	4
Y5	80	30	3	226	59	7

1.3 Platform revenue (Year 1 base)

Stream	AED	Rationale
Developer subscriptions (2 × 50k)	100,000	Founder-network seed users
Broker subscriptions (8 × 20k)	160,000	Founder-network seed users
Architect subscriptions (10 × 10k)	100,000	Architect community outreach
Investor/Buyer subscriptions (20 × 5k)	100,000	Waitlist conversion
Land Owner subscriptions (Y2+)	0	Launches Y2
2 % ZAAHI Service Fee on platform-routed deals	50,000	Minimal Y1 (platform just launched)
Archibald AI premium access (Y2+)	0	Launches Y2
Total platform revenue Year 1	**510,000**	

1.4 Cost structure (Year 1 monthly OpEx + CoR ≈ AED 285,000; annual ~AED 3,410,000)

See Tab 3 for breakdown.

1.5 Capital structure

- Rudi investment: **AED 1,000,000** at Closing.
- Working capital reserve target: AED 300,000 minimum.
- 3-month operating reserve: AED 700,000 minimum (scales with OpEx).

1.6 Equity structure and Sunset parameters

Parameter	Value
Agency cap pre-Sunset	Rudi 80 % · Dymo 10 % · Zhan 10 %
Agency cap post-Sunset	Rudi 33.34 % · Dymo 33.33 % · Zhan 33.33 %
Platform cap (perpetual)	Zhan 80 % · Dymo 10 % · Rudi 10 %
Profit distribution (fixed pre- and post-Sunset)	70 % Platform / 10 % Rudi / 10 % Dymo / 10 % Zhan
Agency post-money implied	AED 1,250,000 (pre-operational)
Post-revenue Y2 valuation expected	AED 25–40 M (3–5× revenue multiple)
Sunset Financial Trigger	Rudi cumulative distributions AED 2,000,000 (across both entities)
Sunset Time Trigger	5th anniversary of SAFE Closing Date
Sunset is earlier of (a) or (b)	automatic

Tab 2 — Revenue Projections

Year 1 monthly schedule (base case)

Month	Plot deals	Floor deals	Agency commission	Platform rev	Total revenue
M1	0	0	0	20,000	20,000
M2	0	0	0	25,000	25,000
M3	1	0	450,000	30,000	480,000
M4	1	0	450,000	35,000	485,000
M5	1	0	450,000	40,000	490,000
M6	1	0	450,000	40,000	490,000
M7	1	0	450,000	45,000	495,000
M8	1	0	450,000	45,000	495,000
M9	1	1	1,650,000	50,000	1,700,000
M10	1	0	450,000	55,000	505,000
M11	2	0	900,000	60,000	960,000
M12	2	1	2,100,000	65,000	2,165,000
Y1 total	**12**	**2**	**7,800,000**	**510,000**	**8,310,000**

Years 2–5 (base case)

Year	Plot deals	Floor deals	Large plots	Agency rev	Platform rev	Total rev
Y2	24	4	0	15,500,000	3,500,000	19,000,000
Y3	45	8	1	33,500,000	8,500,000	42,000,000
Y4	65	15	3	65,000,000	25,000,000	90,000,000
Y5	80	30	3	130,000,000	60,000,000	190,000,000

Tab 3 — OpEx + CoR (summary)

Line	Y1	Y2	Y3	Y4	Y5
Cost of Revenue	1,800,000	4,300,000	9,400,000	20,300,000	44,500,000
Agent commissions (15% of Agency)	1,170,000	2,325,000	5,025,000	9,750,000	19,500,000
Direct deal costs + infra + payments + data + support + other	630,000	1,975,000	4,375,000	10,550,000	25,000,000
Operating Expenses	1,610,000	4,450,000	10,100,000	24,880,000	53,400,000
S&M	350,000	1,250,000	3,500,000	10,500,000	25,000,000
R&D	300,000	1,100,000	2,900,000	7,800,000	17,000,000
G&A (founder comp, office, legal, insurance, other)	960,000	2,100,000	3,700,000	6,580,000	11,400,000
Total Costs (CoR + OpEx)	**3,410,000**	**8,750,000**	**19,500,000**	**45,180,000**	**97,900,000**

Agency OpEx allocation ≈ 55 % · Platform OpEx allocation ≈ 45 % (subject to cost-centre split at SHA).

Tab 4 — Cashflow (Year 1 monthly, base case)

Starting cash: AED 1,000,000 (Rudi Investment).

Month	Revenue	OpEx+CoR	Net	Cumulative
M1	20,000	215,000	–195,000	805,000
M2	25,000	220,000	–195,000	610,000
M3	480,000	335,000	145,000	755,000
M4	485,000	260,000	225,000	980,000
M5	490,000	260,000	230,000	1,210,000
M6	490,000	265,000	225,000	1,435,000
M7	495,000	270,000	225,000	1,660,000
M8	495,000	280,000	215,000	1,875,000
M9	1,700,000	400,000	1,300,000	3,175,000
M10	505,000	295,000	210,000	3,385,000
M11	960,000	340,000	620,000	4,005,000
M12	2,165,000	470,000	1,695,000	5,700,000

Operating breakeven: **Month 2** (first deal closes Month 3, cash-positive from M3). Capital breakeven: **Month 4**.

Tab 5 — Distribution Waterfall (4 Sunset Scenarios + Platform IPO)

This is the **key tab for Rudi**. Each scenario tracks Rudi's cumulative cash distributions across both entities and the Sunset trigger timing. Then Platform IPO exit scenarios are modelled separately.

Profit split reminder: 70 % Platform, 10 % Rudi, 10 % Dymo, 10 % Zhan (fixed pre- and post-Sunset). Sunset changes Agency equity cap only (80/10/10 → 33.34/33.33/33.33).

Scenario 1 — Fast Sunset (Financial Trigger late Year 1 / early Year 2)

Aggressive case: 20 deals + 5 floors + 1 large plot Y1 (AED 22 M Agency Y1 + AED 800 K Platform Y1).

Year	Distributable Net Profit (AED)	Rudi (10 %)	Cumulative Rudi	Trigger
Y1	12,500,000	1,250,000	1,250,000	No
Y2	20,000,000	2,000,000	**3,250,000**	**√ Financial Trigger fires early-Y2**
Y3+ post-Sunset	scaling	10 % continuing	continuing	—
Lifetime Rudi (Y1–Y10 est.)			**AED 700 M+**	Base-style Platform IPO Y10 AED 8.4 B

Outcome: Rudi receives 2× back mid-Y2; Sunset fires early; Agency rebalances to 33.34/33.33/33.33. Rudi continues receiving 10 % of Agency profits and 10 % of Platform distributions for life.

Scenario 2 — Base Case Sunset (Financial Trigger mid-Year 3)

Base case: 12 plots + 2 floors Y1 = AED 7.8 M Agency + AED 510 K Platform.

Year	Distributable Net Profit (AED)	Rudi (10 %)	Cumulative Rudi	Trigger
Y1	4,068,000	407,000	407,000	No
Y2	8,100,000	810,000	1,217,000	No
Y3	17,500,000	1,750,000	**2,967,000**	**√ Financial Trigger fires mid-Y3**
Y4	37,000,000	3,700,000	6,667,000	(Sunset fired; Rudi continues 10 %)
Y5	76,000,000	7,600,000	14,267,000	—
Y6–10 post-Sunset	scaling	continuing	continuing	—
Lifetime Rudi (Y1–Y10 est.)			**AED 437 M**	Platform IPO Y10 AED 5.6 B

Outcome: Financial Trigger fires mid-Y3 (base case). Agency rebalances. Rudi continues at 10 % profit share. **Rudi Y1 cash AED 407 K; cumulative to Y5 AED 14.27 M; 10-year total return AED 437 M (437×).**

Scenario 3 — Slow Sunset (Stress — Financial Trigger mid-Year 4)

Stress: 8 deals + 1 floor Y1 (Conservative scenario).

Year	Distributable Net Profit (AED)	Rudi (10 %)	Cumulative Rudi	Trigger
Y1	2,100,000	210,000	210,000	No
Y2	4,600,000	460,000	670,000	No
Y3	9,800,000	980,000	1,650,000	No
Y4	20,000,000	2,000,000	**3,650,000**	**√ Financial Trigger fires mid-Y4**
Y5	42,000,000	4,200,000	7,850,000	—
Y6–10 post-Sunset	scaling	continuing 10 %	continuing	—
Lifetime Rudi (Y1–Y10 est.)			**AED 220 M**	Conservative Platform IPO Y10 AED 2.4 B

Outcome: Financial Trigger fires mid-Y4 (Conservative). Agency rebalances. Rudi's 1× liquidation preference (AED 1 M) remains as floor on any future sale.

Scenario 4 — Time Trigger (backstop, no Financial Trigger by Y5)

Hypothetical extreme Conservative: deal volume compresses further.

Year	Cumulative Rudi	Trigger
Y1	100,000	No
Y2	300,000	No
Y3	700,000	No
Y4	1,300,000	No
Y5	1,900,000	√ **Time Trigger fires Y5** (Financial not met)

Outcome: Without the Time Trigger, Rudi stays 80 % Agency owner past Y5. The 5-year Time Trigger (in the actual deal) prevents this — conversion guaranteed at Y5 regardless of velocity.

Waterfall summary

Scenario	Trigger fires	Time	Rudi cumulative at Sunset	10-year total return
1 — Aggressive	Financial	Early-Y2	AED 3.25 M	AED 700 M+
2 — **Base**	**Financial**	**Mid-Y3**	**AED 2.97 M**	**AED 437 M (437×)**
3 — Conservative	Financial	Mid-Y4	AED 3.65 M	AED 220 M
4 — Time-cap extreme	Time	Y5	AED 1.9 M	Stress-floor ~AED 80 M

Platform IPO exit scenarios

Platform IPO is the primary exit path. Platform Y5 revenue AED 60 M; Y10 target AED 800 M. At Y10 IPO with typical PropTech 6–9× revenue multiple → AED 4.8–7.2 B valuation.

Assumed dilution ladder (typical institutional rounds):

Round	Dilution from round	Rudi's % post-round (with weighted-avg before Series A, pro-rata after)
Pre-Series A (Platform formation)	—	10.0 %
Series A (20 % new investor)	–20 % cap-table	8.0 % (pro-rata participation optional, at Rudi's cost)
Series B (15 % new investor)	–15 %	6.8 %
Series C (15 % new investor)	–15 %	5.8 %
Pre-IPO	—	5.8 %
IPO (25 % new float)	–25 %	4.4 % floating stake (if no participation at A–C)

Rudi's IPO proceeds at various Platform Y10 valuations (assuming 5.8 % effective Platform stake pre-IPO, post-Series-C dilution):

Platform IPO valuation (AED)	Rudi's 5.8 % stake value
2.4 B (Conservative)	~AED 140 M
5.6 B (Base)	**~AED 322 M**
8.4 B (Aggressive)	~AED 490 M

Agency exit (separate from Platform): at any Liquidity Event of the Agency, Rudi's share is 80 % pre-Sunset or 33.34 % post-Sunset of the Agency sale proceeds (less 1× liquidation preference election if lower).

Rudi's lifetime economic outcome = Agency quarterly distributions (Y1 through sale/dissolution) + Platform distributions and IPO proceeds. **Base case 10-year total: AED 437 M on AED 1 M Investment (437× MOIC, ~80 % IRR).**

Tab 6 — Scenarios (toggle)

Conservative / Base / Aggressive side-by-side:

Metric	Conservative	Base	Aggressive
Year 1 plot deals	8	12	20
Year 1 floor deals	1	2	5
Year 1 large plot	0	0	1 (AED 200 M × 1 %)
Year 1 Agency revenue	4,800,000	7,800,000	20,000,000
Year 1 Platform revenue	400,000	510,000	2,000,000
Year 1 Total revenue	5,200,000	8,310,000	22,000,000
Year 1 Distributable Net Profit	2,100,000	4,068,000	12,500,000
Rudi Year 1 distribution	210,000	407,000	1,250,000
10-year total return to Rudi	AED 220 M	**AED 437 M**	AED 700 M+

Tab 6a — Sensitivity Analysis (stress tests)

Parameter	Base Y1	A: Deal volume −50 %	B: Commission rate −20 %	C: Both (Stress)
Year 1 plot deals	12	6	12	6
Avg plot commission	450,000	450,000	360,000	360,000
Floor deals	2	1	2	1
Year 1 Agency revenue	7,800,000	3,900,000	6,240,000	3,120,000
Year 1 total revenue	8,310,000	4,310,000	6,750,000	3,630,000
Year 1 OpEx + CoR	3,410,000	2,500,000	3,400,000	2,300,000
Year 1 Distributable Net Profit	4,068,000	1,500,000	3,000,000	1,100,000
Runway end of Y1	Healthy	AED 2.0 M	AED 3.4 M	AED 1.5 M

Runway calculation. Months until Agency is self-sustaining = (Starting cash − cumulative net outflow) / monthly burn. Base case: Agency self-sustaining from Month 3 onward. Stress C: AED 1 M investment plus Y1 net AED 1.1 M = healthy AED 2.1 M ending cash despite stress.

Tab 7 — Breakeven Analysis

Metric	Conservative	Base	Aggressive
Operating breakeven	Month 4	Month 2	Month 1
Capital breakeven (AED 1 M restored)	Month 9	Month 4	Month 2
Profit breakeven (cumulative > 0)	Month 7	Month 3	Month 2

Tab 8 — KPIs + Sunset Ledger + Tax Efficiency Analysis

Agency KPIs

- Deal velocity: 14 (12 plots + 2 floors) Y1 → 113 (80 plots + 30 floors + 3 large) Y5 base.
- Avg commission per plot deal: AED 450,000.
- Avg commission per floor deal: AED 1,200,000.
- Avg commission per large plot: AED 14,000,000.
- Gross margin per deal: 78 % (Y1 base).
- Cost per acquired deal: target < AED 20,000 by Y2 (Y1 founder-led zero-CAC).

Sunset Ledger (tracked monthly, shared with Rudi per the Term Sheet §12(e))

- **Cumulative cash distributions to Rudi (across both entities)** — running total toward the AED 2,000,000 Financial Trigger.
- **Months elapsed since SAFE execution** — running counter toward the 60-month (5-year) Time Trigger.
- **Projected trigger date** — extrapolated from current distribution velocity; which trigger will fire first (financial or time).
- **Current scenario mapping** — current trajectory mapped to Scenario 1 (Aggressive) / 2 (Base) / 3 (Conservative) / 4 (Time-cap).

Tax Efficiency Analysis (three-layer)

Tracks the effective tax burden under the three-layer design (see the Dividend Policy §8).

Layer	Year 1 (SBR not applicable)	Year 2+
Agency CT — 9 % above AED 375 K. SBR NOT available (Y1 Agency revenue AED 7.8 M > AED 3 M threshold)	~2.1 % effective on gross Agency profit (9 % × retained 23 % after Service Fee deduction)	~2.5–4 % effective
Platform CT — if QFZP qualifying	**0 %** on Service Fee income	**0 %** on qualifying income; 9 % on non-qualifying
Shareholder — UAE personal	**0 %**	**0 %**
Combined effective tax on Rudi's distribution	**~2 %**	**~2–3 %**
Transfer Pricing	Local file required from Year 1 (related-party > AED 3.75 M)	Continuing annual updates

Dashboard row: "Year [N] effective tax burden on Rudi distribution: X %. Platform Service Fee deducted at Agency level: AED Y. Platform QFZP status confirmed: Yes/No. TP Local File status: current / pending."

Platform KPIs

- Tier subscription distribution (Developer / Broker / Architect / Investor / Owner mix).
- Monthly active platform users (MAU): 500 end Y1 → 50,000 end Y3.
- Platform revenue per active subscriber: AED 11,500 Y1 → AED 21,100 Y3 → AED 16,100 Y5 (tier mix shift).

Team KPIs

- Headcount: 5 → 13.5 → 26 → 45 → 72 across Y1–Y5.
- Revenue per FTE: AED 1.66 M+ Y1 → AED 2.64 M+ Y5.

Financial KPIs

- Gross margin: Y1 ~78 % → Y3 ~78 % → Y5 ~77 %.
- EBITDA margin: Y1 ~60 % → Y3 ~54 % → Y5 ~49 %.
- Rule of 40: Y2 183 → Y5 160 (consistently >> SaaS Series A benchmark of 30–40).
- Runway: 12+ months at all times; 18+ months pre-Series A.
- Cash on balance sheet: AED 5.7 M+ from end Y1.

Notes for model build

1. **Formulas, not hardcodes.** Every output references Tab 1 Assumptions.
2. **Named ranges:** `PremiumPlotAvgSize`, `PlotCommissionRate`, `FloorAvgSize`, `FloorCommissionRate`, `LargePlotAvgSize`, `LargePlotCommissionRate`, `ZhanSalary`, `RudiCumulativeDistributions`, `SunsetFinTrigger` (2M), `SunsetTimeTrigger` (60 months), `AgencyNetProfit`, `PlatformServiceFee`, `EffectiveTaxRate`.
3. **Scenario switch:** single dropdown cell (Conservative / Base / Aggressive) toggles assumption set.
4. **Sunset tracker:** dedicated row on Dashboard showing "AED X of AED 2,000,000 toward Financial Trigger · Y months of 60 months toward Time Trigger · projected Sunset: [date]."
5. **Tax tracker:** dedicated row on Dashboard showing "Year [N] effective tax burden on Rudi distribution: X %. Platform QFZP status: [confirmed / pending]. TP Local File status: [current / pending]."
6. **Output sheet (Dashboard):** headline metrics only (Y1 revenue 8,310 k, Y1 net profit 4,068 k, breakeven month 2, cash end Y1 AED 5,700 k, Rudi cumulative distribution, projected Sunset trigger mid-Y3, effective tax burden ~2 %).
7. **Version control:** each iteration saved with date suffix.

End of Financial Model specification. To be converted to Excel / Google Sheets by Zhan + Dymo before the Sunday 2026-04-19 Al Jurf meeting (or Week 1 post-MOU).
