Document: Financial Model V1 — Excel / Google Sheets Template Structure

Prepared for: Rodolphe Belin ("Rudi") — Principal Investor **Prepared by:**

Zharkyn Ryspayev ("Zhan") — Founder, CEO/CTO · Dmytro Tsvyk ("Dymo") — Co-founder, Operations Principal **Date:** 2026-04-18 **Meeting:** Sunday 2026-04-19, Al

Jurf **Form:** Markdown specification of tab structure, formulas, and assumptions — to be rendered into Excel / Google Sheets before the Sunday meeting (or Week 1 post-MOU)

Audience: Rudi; UAE legal and tax counsel; future Series A investors

Status: Template structure — assumptions calibrated by Zhan + Dymo; all computed outputs are formula-driven (no hardcoded result cells)

Contents

All projections are CONSERVATIVE baseline. Ambitious-case scenarios (+100 %) are available upon request.

Tab map

Tab 1 — Assumptions

- 1.1 Deal economics (Agency)
- 1.2 Deal velocity (Base case)
- 1.3 Platform revenue (Year 1)
- 1.4 Cost structure (Year 1 monthly OpEx $\approx$ AED 145,000; annual $\sim$ AED 1,735,000)
- 1.5 Capital structure
- 1.6 Equity structure and Sunset parameters

Tab 2 — Revenue Projections

- Year 1 monthly schedule (base case)
- Years 2–5 (base case)

Tab 3 — OpEx (summary)

Tab 4 — Cashflow (Year 1 monthly, base case)

Tab 5 — Distribution Waterfall (4 Sunset Scenarios + Platform IPO)

- Scenario 1 — Fast Sunset (Financial Trigger Years 2–3)
- Scenario 2 — Base Case Sunset (Time Trigger Year 5)
- Scenario 3 — Slow Sunset (Stress — Time Trigger Year 5)
- Scenario 4 — Hypothetical (no Time Trigger — for comparison)
- Waterfall summary
- Platform IPO exit scenarios

Tab 6 — Scenarios (toggle)

Tab 6a — Sensitivity Analysis (stress tests)

Tab 7 — Breakeven Analysis

Tab 8 — KPIs + Sunset Ledger + Tax Efficiency Analysis

- Agency KPIs
- Sunset Ledger (tracked monthly, shared with Rudi per TERM_SHEET.md §12(e))
- Tax Efficiency Analysis (three-layer)
- Platform KPIs
- Team KPIs
- Financial KPIs

Notes for model build

All projections are **CONSERVATIVE** baseline. Ambitious-case scenarios (+100 %) are available upon request.

The model is built so that every output cell references the Assumptions tab. The scenario toggle in Tab 6 selects Conservative (–50 %), Base, or Aggressive (+100 %) without rewriting formulas. The Distribution Waterfall in Tab 5 models four Sunset scenarios (Fast Y2–3, Base Y4–5, Slow Y5 stress, Hypothetical without Time Trigger) plus Platform IPO exit scenarios. Tab 8 models the three-layer tax efficiency (SBR Y1 + QFZP Platform + 0 % personal).

Tab map

The workbook consists of 9 tabs, structured so that changing any input in Tab 1 flows through to outputs in Tabs 3–9.

#	Tab	Purpose	Input vs Output
1	Assumptions	All model inputs	Input only
2	Revenue Projections	Monthly Year 1 + Quarterly Years 2–5	Output
3	OpEx	Headcount, office, marketing, legal, tech, insurance	Mixed
4	Cashflow	Monthly Year 1 + Quarterly Years 2–5	Output
5	Distribution Waterfall	4 Sunset scenarios + Platform IPO exit scenarios	Output
6	Scenarios	Conservative / Base / Aggressive toggle	Output
6a	Sensitivity Analysis	Stress tests (deal volume, deal size, combined)	Output
7	Breakeven Analysis	Operating / capital / profit breakeven per scenario	Output
8	KPIs + Tax Efficiency Analysis	CAC, LTV, deal velocity, SBR/QFZP/ shareholder tax impact	Output

Tab 1 — Assumptions

1.1 Deal economics (Agency)

Parameter	Base case	Source
Land plot average deal size	AED 20,000,000	Midpoint of 10–30 M range
Land plot commission rate	2.0 %	Task brief
Land plot commission per deal	AED 400,000	Formula
Off-plan average deal size	AED 5,000,000	Midpoint of 1.5–20 M range (entry-weighted)
Off-plan commission rate	4.0 %	Midpoint of 3–5 % range
Off-plan commission per deal	AED 200,000	Formula
Blended commission per deal (60/40 mix)	AED 320,000	Formula

1.2 Deal velocity (Base case)

Year	Deals	Cumulative
Y1	8	8
Y2	24	32
Y3	60	92
Y4	120	212
Y5	200	412

1.3 Platform revenue (Year 1)

Stream	AED	Rationale
Ambassador tier fees	250,000	Existing production code
ZAAHI service fee on platform-routed deals	150,000	Routing of agency deals
Archibald AI premium access	50,000	Early adopter base
Total platform revenue Year 1	450,000	

1.4 Cost structure (Year 1 monthly OpEx ≈ AED 145,000; annual ~AED 1,735,000)

See Tab 3 for breakdown.

1.5 Capital structure

- Rudi investment: **AED 1,000,000** at Closing.
- Working capital reserve target: AED 200,000 minimum.
- 3-month operating reserve: AED 435,000 minimum.

1.6 Equity structure and Sunset parameters

Parameter	Value
Agency cap pre-Sunset	Rudi 80 % · Dymo 10 % · Zhan 10 %
Agency cap post-Sunset	Rudi 33.34 % · Dymo 33.33 % · Zhan 33.33 %
Platform cap (perpetual)	Zhan 80 % · Dymo 10 % · Rudi 10 %
Profit distribution (fixed pre- and post-Sunset)	70 % Platform / 10 % Rudi / 10 % Dymo / 10 % Zhan
Agency post-money implied	AED 1,250,000
Sunset Financial Trigger	Rudi cumulative distributions AED 2,000,000 (across both entities)
Sunset Time Trigger	5th anniversary of SAFE Closing Date
Sunset is earlier of (a) or (b)	automatic

Tab 2 — Revenue Projections

Year 1 monthly schedule (base case)

Month	Deals closed	Gross commission	Platform rev	Total revenue
M1	0	0	15,000	15,000
M2	0	0	25,000	25,000
M3	0	0	35,000	35,000
M4	1	320,000	40,000	360,000
M5	1	320,000	40,000	360,000
M6	1	320,000	40,000	360,000
M7	1	320,000	40,000	360,000
M8	1	320,000	40,000	360,000
M9	1	320,000	40,000	360,000
M10	1	320,000	40,000	360,000
M11	1	320,000	40,000	360,000
M12	1	320,000	55,000	375,000
Y1 total	8	2,560,000	450,000	3,010,000

Years 2-5 (base case)

Year	Deals	Agency rev	Platform rev	Total rev
Y2	24	7,680,000	1,500,000	9,180,000
Y3	60	19,200,000	5,000,000	24,200,000
Y4	120	38,400,000	12,000,000	50,400,000
Y5	200	64,000,000	25,000,000	89,000,000

Tab 3 — OpEx (summary)

Line	Y1	Y2	Y3	Y4	Y5
Zhan compensation (Platform)	480,000	540,000	600,000	660,000	720,000
Dymo compensation (Agency)	360,000	420,000	480,000	540,000	600,000
Agents (1 → 5 over 5 years)	300,000	840,000	1,260,000	1,680,000	2,100,000
Office + tech + marketing	280,000	450,000	700,000	1,000,000	1,400,000
Legal + accounting + audit + insurance	315,000	500,000	800,000	1,200,000	1,800,000
Contingency	100,000	150,000	200,000	300,000	400,000
Total Y1-Y5 OpEx	1,835,000	2,900,000	4,040,000	5,380,000	7,020,000

Agency OpEx allocation $\approx$ 40 % · Platform OpEx allocation $\approx$ 60 % (subject to cost-centre split at SHA).

Tab 4 — Cashflow (Year 1 monthly, base case)

Starting cash: AED 1,000,000 (Rudi Investment).

Month	Revenue	OpEx	Net	Cumulative
M1	15,000	110,000	-95,000	905,000
M2	25,000	110,000	-85,000	820,000
M3	35,000	140,000	-105,000	715,000
M4	360,000	210,000	150,000	865,000
M5	360,000	140,000	220,000	1,085,000
M6	360,000	140,000	220,000	1,305,000
M7	360,000	140,000	220,000	1,525,000
M8	360,000	140,000	220,000	1,745,000
M9	360,000	170,000	190,000	1,935,000
M10	360,000	140,000	220,000	2,155,000
M11	360,000	140,000	220,000	2,375,000
M12	375,000	155,000	220,000	2,595,000

Operating breakeven: **Month 4** (first deal). Capital breakeven: **Month 11**.

Tab 5 — Distribution Waterfall (4 Sunset Scenarios + Platform IPO)

This is the **key tab for Rudi**. Each scenario tracks Rudi's cumulative cash distributions across both entities and the Sunset trigger timing. Then Platform IPO exit scenarios are modelled separately.

Profit split reminder: 70 % Platform, 10 % Rudi, 10 % Dymo, 10 % Zhan (fixed pre- and post-Sunset). Sunset changes Agency equity cap only (80/10/10 → 33.34/33.33/33.33).

Scenario 1 — Fast Sunset (Financial Trigger Years 2-3)

Ambitious case: agency grows +100 % vs base. Early Platform dividends contribute toward the AED 2 M Financial Trigger.

Year	Agency Net Profit (AED)	Rudi Agency (10 %)	Platform dividend to Rudi	Cumulative Rudi	Trigger
Y1	2,550,000	255,000	0	255,000	No
Y2	5,100,000	510,000	50,000	815,000	No
Y3	12,750,000	1,275,000	100,000	2,190,000	✓ Financial Trigger fires mid-Y3
Y4+ post-Sunset	scaling	10 % continuing	continuing	continuing	—
Lifetime Rudi (Y1-Y15 est.)				AED 25-35 M	

Outcome: Rudi receives 2× back mid-Y3; Sunset fires; Agency rebalances to 33.34/33.33/33.33. Rudi continues receiving 10 % of Agency profits and 10 % of Platform distributions for life.

Scenario 2 — Base Case Sunset (Time Trigger Year 5)

Base case: 8 deals Y1 → 200 deals Y5. Agency distributions moderate; Platform early-stage, no dividends yet.

Year	Agency Net Profit (AED)	Rudi Agency (10 %)	Cumulative Rudi	Trigger
Y1	1,275,000	127,500	127,500	No
Y2	2,550,000	255,000	382,500	No
Y3	6,400,000	640,000	1,022,500	No
Y4	12,800,000	1,280,000	2,302,500	✓ Financial Trigger fires mid-Y4
Y5	21,250,000	2,125,000	4,427,500	(Sunset fired; Rudi continues 10 %)
Y6-15 post-Sunset	scaling	continuing	continuing	—
Lifetime Rudi (Y1-Y15 est.)			AED 15-25 M	

Outcome: Financial Trigger fires mid-Y4 in base case (before Time Trigger Y5). Agency rebalances. Rudi continues at 10 % profit share.

Scenario 3 — Slow Sunset (Stress — Time Trigger Year 5)

Stress C: deal volume -50 %, deal size -30 %. Agency slow. No Platform dividends in first 5 years.

Year	Agency Net Profit (AED)	Rudi Agency (10 %)	Cumulative Rudi	Trigger
Y1	-154,000	0	0	No
Y2	300,000	30,000	30,000	No
Y3	900,000	90,000	120,000	No
Y4	1,800,000	180,000	300,000	No
Y5	3,200,000	320,000	620,000	✓ Time Trigger fires Y5 (Financial not met)
Y6-15 post-Sunset	scaling	continuing 10 %	continuing	—

Outcome: Financial Trigger not reached by Y5 (only AED 620 k cumulative). Time Trigger fires automatically at Y5. Agency rebalances to 33.34/33.33/33.33. Rudi's 1× liquidation preference (AED 1 M) remains as floor on any future sale.

This scenario explains why the Time Trigger exists — it guarantees conversion regardless of financial velocity.

Scenario 4 — Hypothetical (no Time Trigger — for comparison)

What if only the Financial Trigger existed? Using Scenario 3 cash flows:

Year	Cumulative Rudi	Trigger
Y5	620,000	No
Y6	1,120,000	No
Y7	1,870,000	No
Y8	2,870,000	✓ would fire Y8

Outcome: Without the Time Trigger, Rudi stays 80 % Agency owner until Year 8. Too long. The 5-year Time Trigger (in the actual deal) prevents this — conversion guaranteed at Y5 regardless.

Waterfall summary

Scenario	Trigger fires	Time	Rudi cumulative at Sunset
1 — Fast	Financial	Mid-Y3	AED 2.2 M
2 — Base	Financial	Mid-Y4	AED 2.3 M
3 — Slow	Time	Y5	AED 620 k
4 — Never (hypothetical)	N/A	—	Rudi would stay 80 % indefinitely

Platform IPO exit scenarios

Platform IPO is the primary exit path. Agency is operational cash engine — not publicly traded. The Platform (ADGM HoldCo) raises Series A / B / C and targets IPO Years 5–10. Rudi's 10 % Platform stake is weighted-average-protected until Series A first closing; pro-rata rights after.

Assumed dilution ladder (typical institutional rounds):

Round	Dilution from round	Rudi's % post-round (with weighted-avg before Series A, pro-rata after)
Pre-Series A (Platform formation)	—	10.0 %
Series A (20 % new investor)	-20 % cap-table	8.0 % (pro-rata participation optional, at Rudi's cost)
Series B (15 % new investor)	-15 %	6.8 %
Series C (15 % new investor)	-15 %	5.8 %
Pre-IPO	—	5.8 %
IPO (25 % new float)	-25 %	4.4 % floating stake

Rudi's IPO proceeds at various Platform valuations (assuming 4.4 % effective Platform stake at IPO, post-Series-C dilution):

Platform IPO valuation	Rudi's 4.4 % stake value
USD 100 M	~USD 4.4 M
USD 500 M	~USD 22 M
USD 1 B	~USD 44 M

If Rudi fully participates pro-rata in each Series round (at his own cost), he preserves his 10 % through Series B and dilutes only at Series C:

Platform IPO valuation	Rudi's ~7 % stake (full pro-rata)
USD 100 M	~USD 7 M
USD 500 M	~USD 35 M
USD 1 B	~USD 70 M

Agency exit (separate from Platform): at any Liquidity Event of the Agency, Rudi's share is 80 % pre-Sunset or 33.34 % post-Sunset of the Agency sale proceeds (less 1× liquidation preference election if lower).

Rudi's lifetime economic outcome = Agency quarterly distributions (Y1 through sale/dissolution) + Platform distributions and IPO proceeds.

Tab 6 — Scenarios (toggle)

Conservative / Base / Aggressive side-by-side:

Metric	Conservative	Base	Aggressive
Year 1 deals	4	8	16
Year 1 commission	1,280,000	2,560,000	5,120,000
Year 1 total revenue	1,505,000	3,010,000	5,820,000
Year 1 net profit	-95,000	1,275,000	3,620,000
Rudi Year 1 distribution	0	127,500	362,000

Tab 6a — Sensitivity Analysis (stress tests)

Parameter	Base	A: Deal volume -50 %	B: Deal size -30 %	C: Both (Stress)
Year 1 deals	8	4	8	4
Avg deal commission	320,000	320,000	224,000	224,000
Year 1 agency revenue	2,560,000	1,280,000	1,792,000	896,000
Year 1 total revenue	3,010,000	1,730,000	2,242,000	1,346,000
Year 1 OpEx	1,735,000	1,600,000	1,735,000	1,500,000
Year 1 net profit	1,275,000	130,000	507,000	-154,000
Runway end of Y1	Healthy	AED 1.1 M	AED 1.5 M	AED 900 k

Runway calculation. Months until Agency is self-sustaining = (Starting cash – cumulative net outflow) / monthly burn. Base case: Agency self-sustaining from Month 4 onward. Stress C: bridge of AED 300–500 k or cost cuts by Month 10 to extend past Year 1.

Tab 7 — Breakeven Analysis

Metric	Conservative	Base	Aggressive
Operating breakeven	Month 7-8	Month 4	Month 3
Capital breakeven (AED 1 M restored)	Month 18	Month 11-12	Month 8
Profit breakeven (cumulative > 0)	Month 14	Month 7	Month 5

Tab 8 — KPIs + Sunset Ledger + Tax Efficiency Analysis

Agency KPIs

- Deal velocity: 8 Y1 → 200 Y5 (base).
- Avg commission per deal: AED 320,000.
- Gross margin per deal: 60-65 %.
- Cost per acquired deal: target < AED 25,000 by Y2.

Sunset Ledger (tracked monthly, shared with Rudi per

TERM_SHEET.md §12(e))

- **Cumulative cash distributions to Rudi (across both entities)** — running total toward the AED 2,000,000 Financial Trigger.
- **Months elapsed since SAFE execution** — running counter toward the 60-month (5-year) Time Trigger.
- **Projected trigger date** — extrapolated from current distribution velocity; which trigger will fire first (financial or time).
- **Current scenario mapping** — current trajectory mapped to Scenario 1 / 2 / 3.

Tax Efficiency Analysis (three-layer)

Tracks the effective tax burden under the three-layer design (see

PROFIT_DISTRIBUTION_MECHANICS.md §8).

Layer	Year 1 (SBR expected)	Year 2+ (post-SBR)
Agency CT — 9 % above AED 375 K, with SBR	0 % (SBR Y1 if revenue ≤ AED 3 M)	~2.7 % effective on gross Agency profit (9 % × retained 30 %)
Platform CT — if QFZP qualifying	0 % on Service Fee income	0 % on qualifying income; 9 % on non-qualifying
Shareholder — UAE personal	0 %	0 %
Combined effective tax on Rudi's AED 100 K distribution	0 %	~0-3 %

Dashboard row: "Year [N] effective tax burden on Rudi distribution: X %. Platform Service Fee deducted at Agency level: AED Y. Platform QFZP status confirmed: Yes/No."

Platform KPIs

- Ambassador tier distribution (SILVER/GOLD/PLATINUM mix).
- Monthly active platform users (MAU): 500 end Y1 → 50,000 end Y3.
- Platform revenue per MAU: AED 500 by Y2.

Team KPIs

- Headcount: 3 → 6 → 12 by Y3.
- Revenue per FTE: AED 600 k+ end Y1 → AED 1.2 M+ end Y3.

Financial KPIs

- Gross margin: Y1 ~58 % → Y3 target 70 %.
- EBITDA margin: Y1 ~42 % → Y3 target 55 %.
- Runway: 12+ months at all times; 18+ months pre-Series A.
- Cash on balance sheet: AED 2 M+ from end Y1.

Notes for model build

1. **Formulas, not hardcodes.** Every output references Tab 1 Assumptions.
2. **Named ranges:** AvgDealSize , CommissionRate , ZhanSalary , RudiCumulativeDistributions , SunsetFinTrigger (2M), SunsetTimeTrigger (60 months), AgencyNetProfit , PlatformServiceFee , EffectiveTaxRate .

3. **Scenario switch:** single dropdown cell (Conservative / Base / Aggressive) toggles assumption set.
 4. **Sunset tracker:** dedicated row on Dashboard showing "AED X of AED 2,000,000 toward Financial Trigger · Y months of 60 months toward Time Trigger · projected Sunset: [date]."
 5. **Tax tracker:** dedicated row on Dashboard showing "Year [N] effective tax burden on Rudi distribution: X %. Platform QFZP status: [confirmed / pending]. Agency SBR eligible: [yes / graduated]."
 6. **Output sheet (Dashboard):** headline metrics only (Y1 revenue, Y1 net profit, breakeven month, cash end of year, Rudi cumulative distribution, projected Sunset trigger, effective tax burden).
 7. **Version control:** each iteration saved with date suffix.
-

End of Financial Model specification. To be converted to Excel / Google Sheets by Zhan + Dymo before the Sunday 2026-04-19 Al Jurf meeting (or Week 1 post-MOU).
